Hjortebjerg A/S

Hjortebjerg A/S har afsæt i Gartneriet Hjortebjerg I/S, der fra at være et fynsk husmandsted i 1933 - til i dag at være et internationalt potteplantegartneri, der ledes af 3. generation af Thomsen-familien.

I Hjortebjerg Plant Licens, tester vi løbende nye kulturer, for at optimere vores produkt sammensætning. Dette har medført at vi i 2017 får Cuphea med i sortimentet i farverne lilla og hvid.

I 2017 kan vi også præsenterer 5 nye sorter i vores Osteospermum program. En ganske speciel sort er den helt nye "Blue Eyed Beauty", som er gul med blåt øje.

Vision og mission.

Produktion og salg af potteplanter til primært europæiske grossister og detailkæder. El- og varmeproduktion - varme til egen anvendelse og el- til egen anvendelse samt eksternt europæisk salg. Hjortebjerg A/S' potteplanteproduktion opfattes som fleksibel og omstillingsparat, trend- og sæsonorienteret ift. etterspørgslen hos grossister og detailkæder. Et grønt image med egen energieffektiv el- og varmeproduktion samt stadig fokus på minimering af partikel- og CO₂-udslip er et vigtigt grundlag for potteplantesalget. Dette således at: Potteplanter fra Hjortebjerg A/S skal være tilvejebragt med lavest muligt energiforbrug og miljøbelastning til gavn for grossister og detailkæders markedsføring over for slutbrugerne.

Hjortebjerg er nu MPS-A 804516

When founded 1933 Hjortebjerg was a small farm owned by the Thomsen-family, growing a variety of crops from tobacco to fruit. 3 brothers of the by now 3rd generation of the Thomsen-family are today the experienced management of the nursery, which focus on production of horticultural plants only.

In Hjortebjerg Plant Licens we continuously test new cultures to optimize our mix of products. This means that we can add white and purple Cuphea to our 2017 assortment.

In 2017 we also present 5 new varieties to our Osteospermum program - one of them is a quite special variety called "Blue Eyed Beauty" which is yellow with a blue eye.

The Vision and Passion of Hjortebjerg.

The use of energy has always been of big concern to Hjortebjerg.

Since the mid 1980ies the consumption as well as the production of energy has been dealt with professionally. Energy saving actions like: Climate control systems, isolating curtains and the establishment of natural gas based Heat & Power stations are accomplished. Politically attention has especially been given to our energy saving projects eg. the re-circulation of warm air from the nursery is heating up underground water, which is then stored and used for heating of pot plants, when heat is needed.

Regards Alex, Steen and Gert Juul Thomsen
